## Cera Antica

CA\_REV0/2021

**Description:** CERA ANTICA is a decorative paste wax created to enhance the shine of the stucco. Thanks to the simple and quick application with a stainless steel trowel, in a single coat, it allows to obtain excellent marble effects while respecting the processing and the naturalness of the stucco on which it is applied.

**Packaging:** 0,750 - 2,5 L

**Surface preparation:** Before applying CERA ANTICA, make sure that the surface on which the decorative stucco has been applied is perfectly dry.

**Application:** mix carefully before use. Apply CERA ANTICA with a stainless steel trowel, proceeding about 1/2 m2 at a time, until completely absorbed. After 5 minutes at 20 ° C, remove the excess with a soft cloth. After about 30 minutes at 20 ° C, polish the substrate with a dry non-abrasive cloth (TNT-fabric-non-woven, microfibre, cotton or linen).

**Practical advice:** the ambient temperature during the application cycle must be between 5°C and 35°C, the relative humidity must not exceed 80%. During application, avoid direct contact with skin and eyes, use clean water for dilutions, store the undiluted product in the closed packaging in a cool and dry place. The available colours are approximate and can vary from one batch to another. Since the application of the product is not under our constant control, we are not liable for the final result. We recommend testing the product on a small area before decorating the wall.

<b>Specific weight (g/L)</b>	0.980 g/l +/- 50
<b>Packaging (L)</b>	100 - 250 ml
<b>Brookfield viscosity round 6, vel. 20, 20 ° C</b>	da 9000 a 14000 cP
<b>Flash point</b>	not inflammable
<b>Yield (m<sup>2</sup>/L)</b>	15-20 m2/L
<b>Appearance of the dry film</b>	waxed
<b>Dilution</b>	ready to use
<b>Dry at 20°C</b>	3 hours to the touch, 24 hours in depth
<b>Applicare con</b>	stainless steel trowel; polishing with a soft cloth
<b>Color</b>	colorless, gold, silver, bronze
<b>Tool washing</b>	immediately after use with water
